

NEWSLETTER – More than just titanium

The material for the highest demands

Cobalt-chromium-molybdenum (CCM) is a material that impresses with its exceptional properties:

- **Outstanding wear resistance:** perfect for highly stressed implants such as hip and knee prostheses.
- **Corrosion resistance:** Resistant to body fluids and other aggressive environments.
- **Biocompatibility:** Ideally suited for medical applications.
- **High strength combined with ductility:** Enables durable and resilient constructions.

CCM is primarily used in demanding medical technology applications where precision, safety and durability are essential.

Did you know?

While 25 years means silver and 50 years means gold, **23 years** of marriage means a **titanium wedding**. Titanium is a particularly hard metal, and the marriage also appears to be particularly stable after 23 years. Titanium therefore symbolizes strength, longevity and resilience - just like the relationships with our valued customers.
